Specification Drawing

a = 13.7"
b = 8.3"
d = 2.8"

Description

The 4" PLURAFIT DN100 Calming Inlet meets ASPE 63 requirements for rainwater collection best practices. By introducing rainwater to the bottom of the tank, any accumulated sediment is undisturbed while water is aerated by the incoming rainwater. Beneficial biofilm is rejuvenated and allowed to grow. The PLURAFIT DN100 allows periodic cleaning if necessary by removal of the bottom bowl without complete removal. Any 4" piping can be attached with the 4" rubber coupling (included).
